

## What is REGEN-COV and how does it work?

When you are infected with severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), the virus that causes COVID-19, your immune system creates antibodies to fight off this virus. However, this takes time, during which the infection may get worse and make you sicker. Giving you pre-made antibodies may help you fight the infection faster than waiting for your immune system to make its own antibodies.

REGEN-COV is a combination antibody treatment for COVID-19, meaning it contains two different antibodies to help you fight the infection. Treatment with REGEN-COV as soon as you are diagnosed with COVID-19 may limit the amount of virus in your body, helping you recover from the infection and preventing you from becoming sicker. REGEN-COV has been tested against different variants of the virus, including the delta variant, and was able to stop the virus from multiplying.

REGEN-COV is given as a single intravenous infusion (through a vein), which will take approximately 30 minutes.

You will be monitored for 1 hour following completion of treatment.

## Am I eligible for REGEN-COV?

REGEN-COV is an investigational medicine used to treat mild to moderate symptoms of COVID-19 in non-hospitalized persons who are:

- at least 12 years old AND
- at least 88 pounds (40 kg) AND
- at high risk of developing severe COVID-19 symptoms or the need for hospitalization

You may also qualify for REGEN-COV if you have been exposed to someone with COVID-19 or are in an area with widespread COVID-19 and are at high risk for developing severe COVID-19 symptoms.

## Am I at risk?

The following medical conditions may place patients at higher risk for progression to severe COVID-19:

- Obesity or being overweight (for example, BMI >25 kg/m<sup>2</sup>, or if age 12-17, have BMI ≥85th percentile for their age and gender based on CDC growth charts)
- Pregnancy
- Chronic kidney disease
- Diabetes
- Immunosuppressive disease or immunosuppressive treatment

- Cardiovascular disease (including congenital heart disease) or hypertension
- Chronic lung diseases (for example, chronic obstructive pulmonary disease, asthma [moderate-to severe], interstitial lung disease, cystic fibrosis and pulmonary hypertension)
- Sickle cell disease
- Neurodevelopmental disorders (for example, cerebral palsy) or other conditions that confer medical complexity (for example, genetic or metabolic syndromes and severe congenital anomalies)
- Having a medical-related technological dependence (for example, tracheostomy, gastrostomy, or positive pressure ventilation (not related to COVID 19))
- Older age (for example, age  $\geq 65$  years of age)

### When should I seek treatment?

If you or your child have recently tested positive for COVID-19 and are at high risk, contact your doctor as soon as possible. **If you have tested positive or think you may have COVID-19, talk to your healthcare provider right away to see if you are eligible for REGEN-COV.** Getting treated early may help your symptoms from worsening and possibly becoming life threatening. If you are a parent or caregiver, talk to your child's healthcare provider as soon as possible.

Before receiving REGEN-COV, the healthcare provider should know about all off you or your child's medical conditions including whether you:

- Have any allergies
- Are pregnant or planning to become pregnant
- Are breastfeeding or plan to breastfeed
- Have any serious illness
- Are taking any medications including over-the-counter drugs, vitamins, and herbal products
