

# The ZENITH study may be an option for people 12 to 55 years old who are allergic to peanut.

## VOLUNTEERS NEEDED

# zenith

ZENITH is a clinical study testing whether peanut oral immunotherapy in combination with an experimental medication will help people allergic to peanut become less sensitive to peanuts and lower the risk of life threatening allergic reactions.

You may be eligible to participate in the ZENITH study if you:

- Are between the ages of 12 and 55
- Are allergic to peanut

**For more information, contact your local ZENITH clinical study site:**
